

Day 1 – Introduction to HTML and Basic Tags

1. Introduction to HTML

HTML (HyperText Markup Language) is the standard markup language used to create web pages. It provides the basic structure of a website by using different tags. HTML is the foundation of web development and is used along with CSS and JavaScript to build attractive and interactive websites.

2. Paragraph Tag (<p>)

The <p> tag is used to create paragraphs on a web page. It helps display text in a well-organized manner by automatically adding space before and after the paragraph.

Example:

```
<p>Welcome to HTML. </p>
```

3. Bold Tag ()

The tag is used to make text bold. It highlights important words or sentences without changing their meaning.

Example:

```
<b>This text is bold. </b>
```

4. Italic Tag (<i>)

The <i> tag is used to display text in italic style. It is commonly used for titles, foreign words, or emphasis.

Example:

```
<i>This text is italic. </i>
```

5. Basic HTML Tags

I also learned some important HTML tags that are used frequently while creating web pages.

- <html> – Defines the HTML document.
- <head> – Contains information about the webpage.

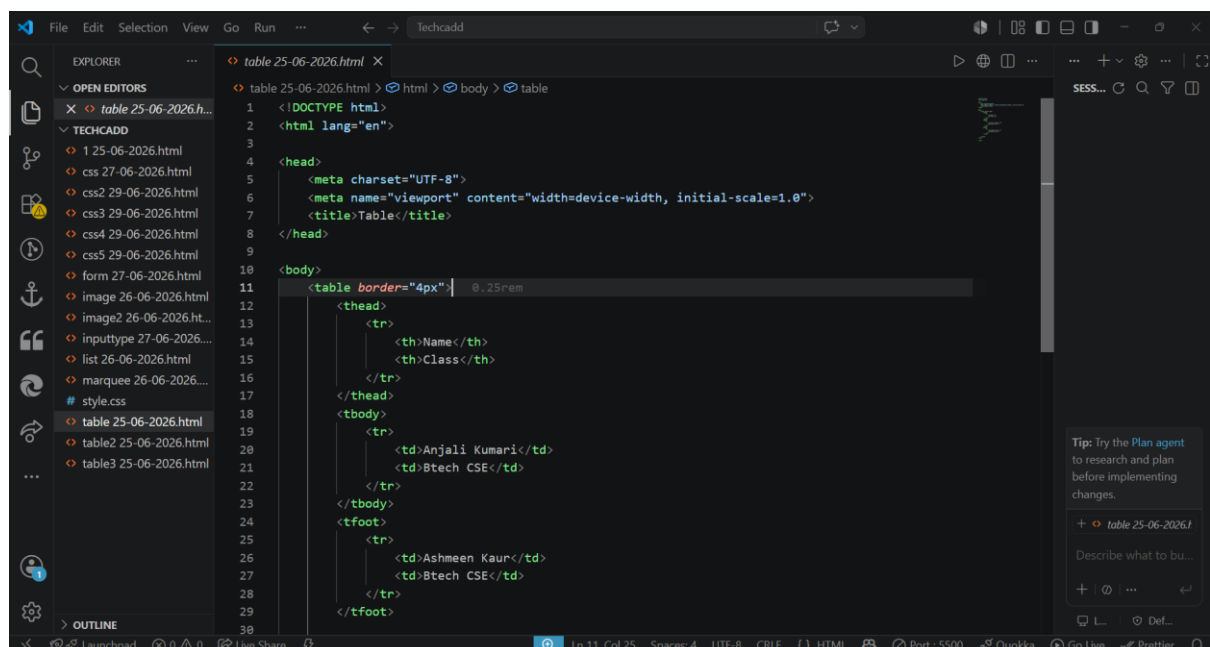

- `<title>` – Displays the page title in the browser tab.
- `<body>` – Contains all visible content of the webpage.
- `<h1>` to `<h6>` – Used to create headings.
- `<br>` – Inserts a line break.
- `<hr>` – Creates a horizontal line.
- `<center>` – Displays content in the center (older HTML tag).

6. HTML Table

The `<table>` tag is used to display data in rows and columns. A table is created using the following tags:

- `<table>` – Creates the table.
- `<tr>` – Creates a table row.
- `<th>` – Creates a table heading.
- `<td>` – Creates a table data cell.

Example:

```

1 <!DOCTYPE html>
2 <html lang="en">
3
4 <head>
5   <meta charset="UTF-8">
6   <meta name="viewport" content="width=device-width, initial-scale=1.0">
7   <title>Table</title>
8 </head>
9
10 <body>
11   <table border="4px">
12     <thead>
13       <tr>
14         <th>Name</th>
15         <th>Class</th>
16       </tr>
17     </thead>
18     <tbody>
19       <tr>
20         <td>Anjali Kumari</td>
21         <td>Btech CSE</td>
22       </tr>
23     </tbody>
24     <tfoot>
25       <tr>
26         <td>Ashmeen Kaur</td>
27         <td>Btech CSE</td>
28       </tr>
29     </tfoot>
30   </table>

```

Name	Class
Anjali Kumari	Btech CSE
Ashmeen Kaur	Btech CSE

Conclusion

Today, I learned the basics of HTML, including paragraph, bold, italic, and other basic tags. I also learned how to create simple tables using HTML. These concepts are the foundation of web development and will help me build web pages in the coming days.
