

Day 3 – HTML Forms and Input Types

1. HTML Form (<form>)

The <form> tag is used to collect information from users. It contains different input fields such as text boxes, radio buttons, checkboxes, and buttons. Forms are commonly used for registration, login, feedback, and contact pages. The <form> tag can send user data to a server using the action and method attributes.

Example:

```

1  <!DOCTYPE html>
2  <html lang="en">
3
4  <head>
5    <meta charset="UTF-8">
6    <meta name="viewport" content="width=device-width, initial-scale=1.0">
7    <title>Form</title>
8  </head>
9
10 <body bgColor="greenyellow">
11
12   <center>
13
14     <form>
15
16       <h2 style="color:red;">Personal Details</h2>
17
18       Name:
19       <input type="text"><br><br>
20
21       Password:
22       <input type="password"><br><br>
23
24       E-mail id:
25       <input type="email"><br><br>
26
27       Gender:
28       <input type="radio" name="gender"> Male
29       <input type="radio" name="gender"> Female
30     </form>
  
```

The rendered form is displayed on a greenyellow background. It contains the following sections:

- Personal Details** (in red text):
 - Name:
 - Password:
 - E-mail id:
 - Gender: ☐ Male ☒ Female
 - Contact:
- Educational Qualification** (in red text):
 - Degree:
 - Engineering:
 - Hobbies: ☐ Playing Chess ☒ Reading Books
- Address** (in red text):
 -

At the bottom, there is an "Attach Resume:" section with a "Choose File" button and "No file chosen" text, followed by a "SUBMIT" button.

2. HTML Input Types (<input>)

The <input> tag is used to create different types of input fields in a form. The type attribute specifies the kind of information the user can enter.

Common Input Types

1. **type="text"**: - Used to enter text such as a name.
2. **type="password"**: - Used to enter a password. The entered characters are hidden.
3. **type="email"**: - Used to enter a valid email address.
4. **type="number"**: - Used to enter numeric values.
5. **type="radio"**: - Allows the user to select only one option from a group.
6. **type="checkbox"**: - Allows the user to select one or more options.
7. **type="date"**: - Used to select a date.
8. **type="file"**: - Used to upload files.
9. **type="submit"**: - Submits the form data.
10. **type="reset"**: - Clears all the entered form data.
11. **type="button"**: - Creates a clickable button.

Example:

The screenshot shows a code editor with the following HTML code:

```

1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <meta name="viewport" content="width=device-width, initial-scale=1.0">
6   <title>Document</title>
7 </head>
8 <body>
9   <input type = "text"><br><br>
10  <input type = "email"><br><br>
11  <input type = "password"><br><br>
12  <input type = "number"><br><br>
13  <input type = "date"><br><br>
14  <input type = "checkbox"><br><br>
15  <input type = "radio"><br><br>
16  <input type = "color"><br><br>
17  <input type = "range"><br><br>
18  <input type = "file"><br><br>
19  <textarea></textarea><br><br>
20  <input type = "submit"><br><br>
21  <input type = "reset"><br><br>
22  <input type = "button"><br>
23 </body>
24 </html>

```

The code is displayed in a dark-themed editor with line numbers. The status bar at the bottom shows 'Ln 11, Col 38', 'Spaces: 4', 'UTF-8', 'CRLF', and 'HTML'. A sidebar on the right contains a search bar and a list of files, including 'inputtype 27-06-2026.html'.

The screenshot displays a web browser window with a single tab titled 'Form'. The address bar shows the URL '127.0.0.1:5500/inputtype%2027-06-2026.html'. The form itself is a vertical stack of various HTML input elements. It begins with a text input containing 'Anjali', followed by an email input with 'anjali@gmail.com', a password input with masked characters, a numeric spinner set to '6', a date selector showing 'dd-mm-yyyy', a checkbox, a radio button, a range slider, a file upload button labeled 'Choose File' with the text 'No file chosen' below it, a text area, a 'Submit' button, a 'Reset' button, and finally a small square checkbox at the bottom.

Conclusion

Today, I learned how to create HTML forms and use different input types to collect user information. I practiced creating registration forms using text fields, password fields, email fields, radio buttons, checkboxes, date selectors, file upload options, and submit/reset buttons. These concepts are essential for developing interactive web applications.
