

Day 2 – Marquee, Lists, Images, and Video in HTML

1. Marquee Tag (<marquee>)

The <marquee> tag is used to make text or images move across a web page. The content can move from left to right, right to left, up, or down. Although this tag is no longer used in modern web development, it is helpful for learning basic HTML animations.

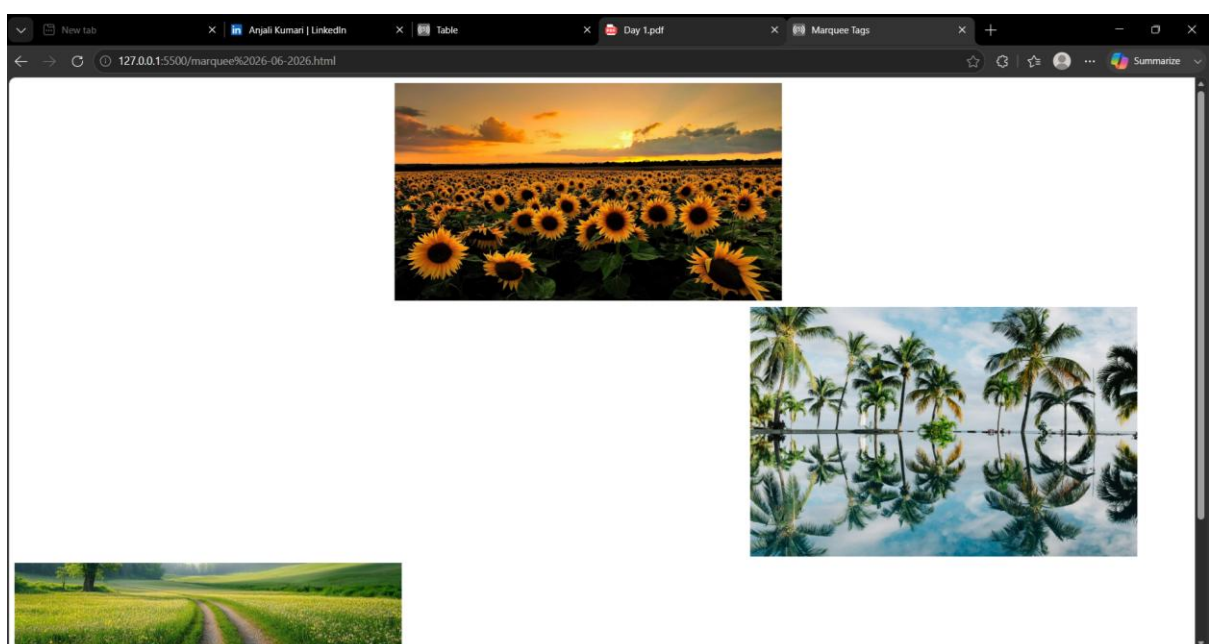

Example:

```

1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <meta name="viewport" content="width=device-width, initial-scale=1.0">
6   <title>Marquee Tags</title>
7 </head>
8 <body>
9   <marquee direction="left">
10    
11  </marquee>
12
13  <marquee direction="right" scrollamount="50">
14    
15  </marquee>
16
17  <marquee direction="up" height="300">
18    
19  </marquee>
20 </body>
21 </html>

```

2. HTML Lists

HTML lists are used to display related items in an organized way. There are three types of lists:

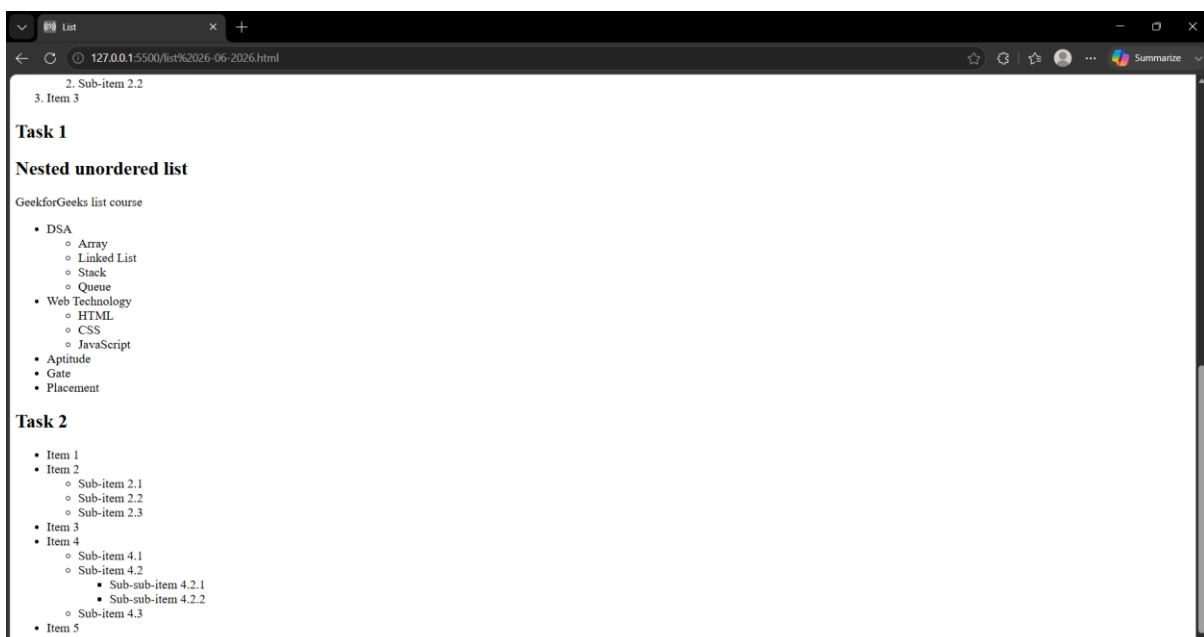

- Ordered List () – Displays items with numbers.
- Unordered List () – Displays items with bullets.
- Description List (<dl>) – Displays terms and their descriptions.

Example:

```

1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <meta name="viewport" content="width=device-width, initial-scale=1.0">
6   <title>List</title>
7 </head>
8 <body>
9   <h2>unordered list</h2>
10  <ul type="disc">
11    <li>Item 1</li>
12    <li>Item 2</li>
13    <li>Item 3</li>
14  </ul>
15  <ul type="square">
16    <li>Item 1</li>
17    <li>Item 2</li>
18    <li>Item 3</li>
19  </ul>
20  <ul type="circle">
21    <li>Item 1</li>
22    <li>Item 2</li>
23    <li>Item 3</li>
24  </ul>
25  <ul type="bullet">
26    <li>Item 1</li>
27    <li>Item 2</li>
28    <li>Item 3</li>
29  </ul>
30  <h2>ordered list</h2>

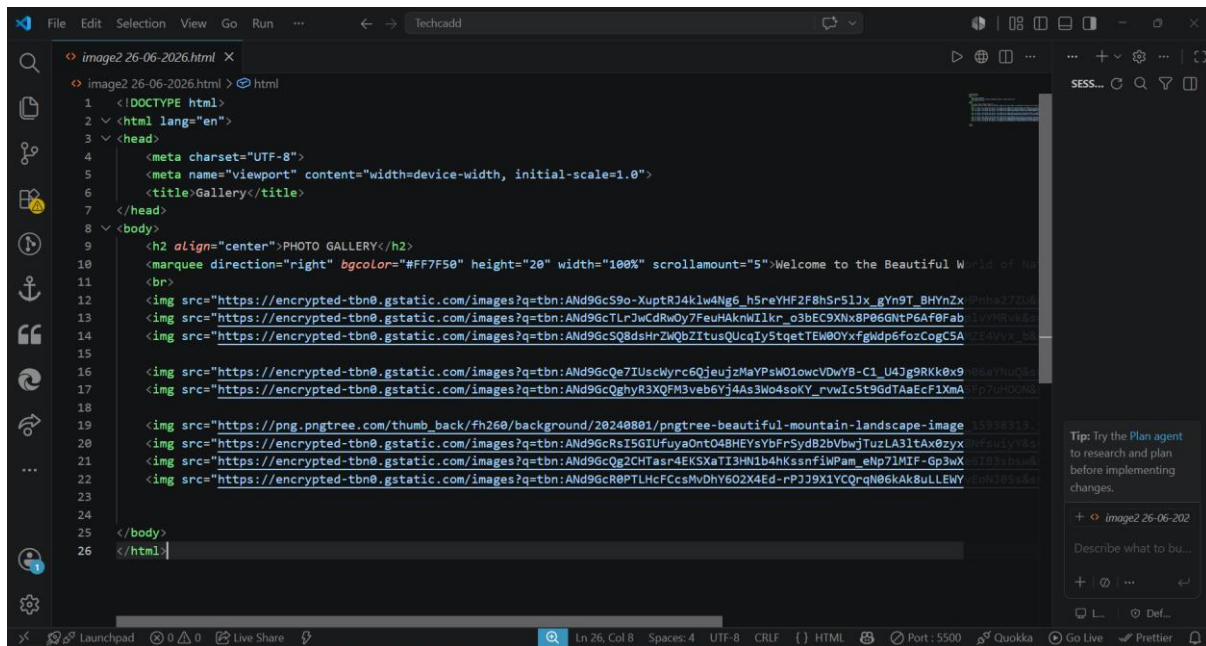

```

3. Image Tag ()

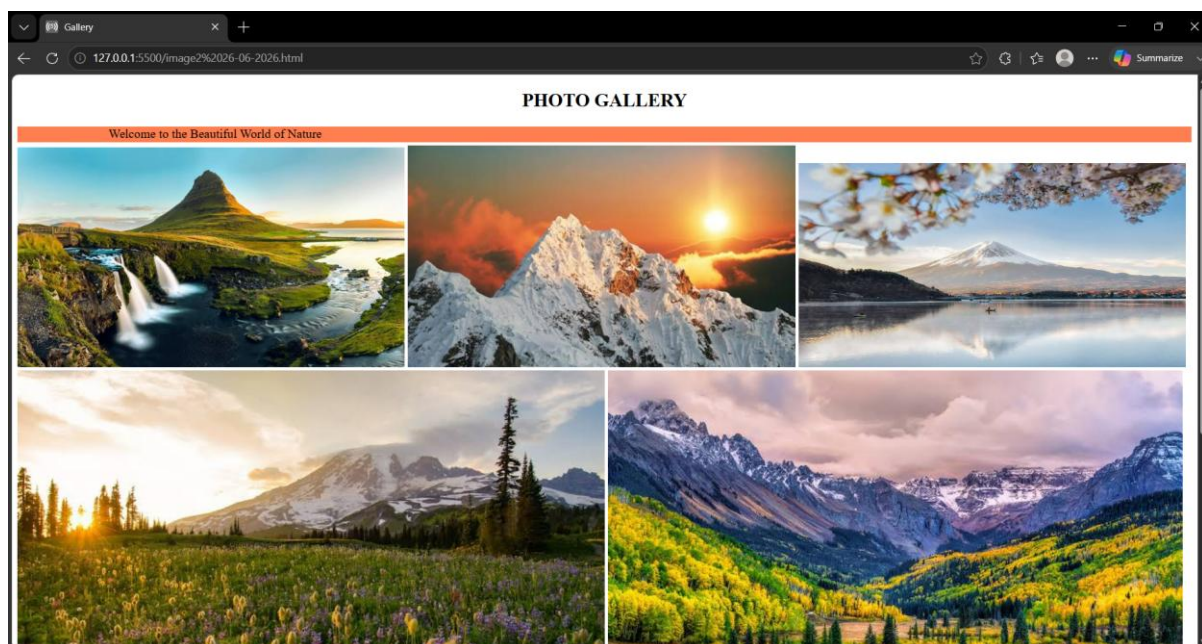

The tag is used to display images on a web page. The src attribute specifies the image path, and the alt attribute provides alternative text if the image cannot be displayed. Width and height can also be set.

Example:

```

1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <meta name="viewport" content="width=device-width, initial-scale=1.0">
6   <title>Gallery</title>
7 </head>
8 <body>
9   <h2 align="center">PHOTO GALLERY</h2>
10  <marquee direction="right" bgcolor="#FF7F50" height="20" width="100%" scrollamount="5">Welcome to the Beautiful W
11 <br>
12  
13  
14  
15
16  
17  
18
19  
20  
21  
22  
23
24 </body>
25 </html>
  
```

4. Video Tag (<video>)

The <video> tag is used to embed videos in a web page. The controls attribute provides play, pause, volume, and fullscreen options for the user.

Example:

```
<video width="320" height="240" controls>  
  <source src="video.mp4" type="video/mp4">  
</video>
```

Conclusion

Today, I learned how to create moving text using the marquee tag, organize information using different types of lists, display images using the tag, and add videos to a web page using the <video> tag. These HTML elements make web pages more attractive, informative, and interactive.
